

SARIA to expand presence in Spain through the acquisition of Bioscor

SARIA is pleased to announce that an agreement has been signed to acquire a 100% shareholding in Bioscor, one of Spain's major rendering groups. The agreement, subject to merger control approval by the Spanish National Commission on Markets and Competition (CNMC), represents a significant step in SARIA's long-term growth strategy and expands its activities in one of Europe's most important livestock and agricultural markets.

Founded in 1960, Bioscor has developed into a trusted partner to the Spanish meat and food industries, operating a network of rendering and fat processing facilities across the country. The company processes animal by-products and has built a strong reputation for operational excellence, reliability and customer service.

The combination of SARIA and Bioscor brings together two highly complementary businesses with deep industry expertise, established operations across Spain and a shared commitment to sustainability and circularity.

About SARIA

SARIA is a German family-owned company with operations around the globe. Committed to the principles of the circular economy, the Group's activities are centered around converting products of animal origin and other organic materials into highly valuable and sustainable ingredients for the food, animal feed, aqua, pet food, pharmaceutical, and energy sectors. "Together towards a sustainable world and healthier living" is the overarching purpose of all of SARIA's activities, an aspiration pursued together with employees and business partners to deliver sustainable solutions worldwide.

About Bioscor

Founded in 1960, Bioscor is a leader in transforming animal by-products into valuable resources, such as animal fats and proteins. Bioscor collects animal by-products that are subsequently used in various essential sectors: fats for the production of biofuels, contributing to clean and renewable energy; a range of specialty meals, a key ingredient in the production of pet food and animal feed, ensuring high-quality nutrition; and fats intended for human consumption, providing safe and reliable products.
